Elevator Pitch

Vision

I help small businesses and solo creators bring their ideas online with clean, interactive websites that help their audience and work smoothly.

Elevator Pitch

Hi, I'm Peter — a Front-End Developer with a background in automation engineering.

I build user-friendly websites using HTML, CSS, JavaScript, and React. Thanks to my **#engineering_mindset**, I focus on clean structure, smart logic, and real-world usability. I'm currently studying in the **#DEPI** Front-End track by Egypt's Ministry of Communications, and always working on new projects to improve my skills.

I mainly work as a freelancer, helping **#startups** and **#individuals** create websites that are **#fast**, **#clear**, and bring **#real_value** to their audience.
